PROFILE

Software engineering student building full-stack applications for health and public-service workflows. Experience with Java/Spring Boot, React, Node.js, REST APIs, and relational databases. Interested in applying software, data, and responsible AI to energy and public-policy problems.

EDUCATION

Adventist University of Central Africa (AUCA) BSc Information Technology, major in Software Engineering Kigali, Rwanda Coursework includes probability and statistics, software engineering, databases, and object-oriented programming.	2022 - present
Lycee Jacques Prevert French Scientific Baccalaureate	2016 - 2019

SELECTED PROJECTS

Pharmacy Management System - desktop solo project Java desktop application, PostgreSQL Built inventory, sales, customer, supplier, and reporting workflows.	2025
Pharmacy Management System - web Spring Boot, React, PostgreSQL, JWT Built a separate web application for medicines, prescriptions, billing, and role-based access.	2025
Owendo Municipal Workflow System final-year project in progress React, Node.js/Express, PostgreSQL Developing a municipal request and workflow system with role-based operations and service tracking; project remains under development.	2026 - present
Immunization Planner & Tracker collaborative project Android/Java, Firebase, HL7 FHIR Contributed to an Android vaccination planning and tracking application in a team project.	2026
Household Chore Manager Spring Boot, Thymeleaf, PostgreSQL, Docker Built a task scheduling application with persistence and automated tests.	2025
BloodDonorSystem collaborative coursework ASP.NET/C#, SQL Server Used C# and ASP.NET to complete a team semester project.	2025

TECHNICAL SKILLS

Languages:	Java, JavaScript, HTML/CSS; C# used in semester coursework; basic Python
Frameworks:	Spring Boot, React, Node.js/Express, ASP.NET coursework
Data and tools:	PostgreSQL, MySQL, SQL Server, Git, GitHub, Docker
Concepts:	Object-oriented programming, REST APIs, relational data modeling, testing
